What's inside

This website presents the 2014 edition of INEMAR atmospheric emission inventory. This inventory has been carried out since its first edition (1997) by Lombardy Region with the collaboration of [Fondazione Lombardia per l'Ambiente](#) (Lombardy Foundation for the Environment) and [ARPA Lombardia](#).

Inside this site you'll find an overview on these topics:

- what emission inventories are
- what an emission into the atmosphere is
- which pollutants we are dealing with and how they affects human health and the environment
- a list of links about these themes
- a schedule of the most important events and conventions concerning atmospheric emissions
- the structure of the INEMAR database (description of modules and informative aspects)

It is possible to access the INEMAR database to download:

- emission data for year 2014 for every municipality of Lombardy. Emissions are grouped by CORINAIR activity (group, sub-group, activity) and by fuel typology. Different aggregation levels can be chosen by the user.
- summarized emission data for the year 2014 at regional, County or critical area level.
- data sources.
